The most important feature of ImageUP is its easy-to-use interface and that it is able to upload photos directly from the system clipboard and preview them on its own. I am not a graphic designer and I don't have any programming knowledge so I do not plan to build such an app. I really want to take this chance to encourage users to participate and contribute to this community. A: I can give a partial answer which will require little or no development effort on your part. It will also require minimal testing effort by you. An alternative to using a drag-and-drop application would be to create a batch file which will take a screenshot and save it as an image. Then you would want to use some kind of text editor to find an image hosting site. For example, in Notepad++ you could use Find > Find in Files, enter the following, select Text only, and paste the image URL: You would need to verify that it works by opening the batch file and the file from which it was generated. If you have no way to paste an image into a batch file, then I would recommend using an image viewer. For example, in Windows 7 you can hold the Windows logo key and press ALT-E to open the File Explorer dialog box. Then in the navigation pane, click Home and then Find to find the text editor which will allow you to paste. Then copy the URL from imgur. Having done that, I would recommend posting your question on StackOverflow. You may get a better answer there than here. The best answers will be those which explain the process in detail. A: I find using imgur very convenient. Just open up the system bar and paste the image from there. This makes the job very simple. However, if you want an app then you need a way to display the image. That way you can just drag the image in from explorer. So you will need an app that comes from your platform, just like imgur does. So, if imgur does it for you then you can do it with an app. I think you can make an app that will do this. All you need to do is grab an image from a system resource, and then display it. Creating a windows app in delphi is reasonably simple, so you can do that. If you are thinking about using Qt
